ADVANCED HEATING TECHNOLOGY

Sunrise SR-03 RADIANT PANEL HEATER

The Ducasa Sunrise radiant panel heater is perfect for providing warmth where wall height is restricted.

Boasting compact and slimline proportions (one of the slimmest on the market), this wall-mounted electric panel heater has been designed specifically to fit low-level walls, attaching directly onto the wall with no need for an electrician or expensive plumbing.

Sunrise radiant panel heaters are ideal for use in conservatories, providing an economical way to carry on making full use of your conservatory throughout the year.

- Wall mounted slimline radiant panel heater
- Specifically designed for conservatories
- Fits 400mm low level wall
- Advanced Micathermic heating element
- Fast heat-up times
- Accurate thermostat with frost protection
- 1.75m cable with moulded 13amp plug
- Easy-fit wall brackets included
- Overheat safety cut out
- 1250 watt / 240v / Class II
- Colour: RAL 9010
- W:1203mm x H:280mm x D:70
- Weight 7.5kg

Advanced Radiant Technology

For a warm, comfortable environment that doesn't cost the earth to heat, advanced radiant panels are an energy-efficient and a cost-effective choice.

Simple-to-operate, Ducasa panel heaters are low-cost to install and economical to run.

Radiant panels work like the sun, heating up the objects in their path, which in turn act as convectors giving off warmth. This results in an even natural heated environment from head to toe so that people don't lose warmth to their surroundings.

It makes Ducasa radiant panel heaters ideal for providing heat in low insulation areas, infrequently used rooms or as back-up heating when the temperature drops below comfort requirements.
