ADVANCED HEATING TECHNOLOGY

Vitro - GLASS FRONTED RADIANT PANEL HEATER

For stunning good looks and state-of-the-art technology, Ducasa's Vitro series of electric panel heaters are hard to beat. These sleek glass panelled heaters are available in black and white and will grace any setting.

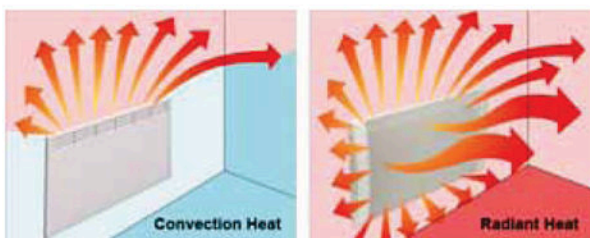

Easy-to-install, they combine radiant heat from the glass with natural convection to give fast and cost-effective warmth.

With touch control for temperature selection, the Vitro can be pilotwired into a central programming system or operated via the Ducasa digital programmer.

- Glass fronted designer radiant panel heater
- Fully programmable 7day / 24hr
- Pilot wire facility for zoned control system
- Infrared receiver for Ducasa remote controller
- Glass front available in black or white
- Digital display & touch screen controls
- Digital thermostat with frost protection
- Bare ended mains cable
- Overheat safety cut out
- 750w - W:665mm x H:495 x D:110
- 1200w - W:837mm x H:495 x D:110
- 1600w - W:1005 x H:495 x D:110
- Colour: Black or White

Advanced Radiant Technology

For a warm, comfortable environment that doesn't cost the earth to heat, advanced radiant panels are an energy-efficient and a cost-effective choice.

Simple-to-operate, Ducasa panel heaters are low-cost to install and economical to run.

Radiant panels work like the sun, heating up the objects in their path, which in turn act as convectors giving off warmth. This results in an even natural heated environment from head to toe so that people don't lose warmth to their surroundings.

It makes Ducasa radiant panel heaters ideal for providing heat in low insulation areas, infrequently used rooms or as back-up heating when the temperature drops below comfort requirements.
